

## Securonix Cloud™

### Security for the Cloud, in the Cloud

As cloud usage has grown, the need to secure your cloud applications and data has also grown. Legacy on-premises solutions often struggle to gain adequate visibility into the cloud, while the capabilities of cloud-based solutions often haven't caught up to their on-premises versions. With Securonix Cloud you receive complete cloud security visibility while benefiting from the reduced cost and overhead that comes with deploying in the cloud.

#### Full Security Analytics Platform Capabilities in the Cloud

Securonix Cloud gives you all the capabilities of Securonix Security Analytics Platform or Securonix UEBA as a cloud-based SaaS solution.

#### Securonix Security Analytics Platform

Combines log management, security incident and event management (SIEM), and UEBA into a complete, end-to-end platform. It collects the massive volumes of data generated by modern enterprises and enriches raw events in real-time with meaningful identity, asset, network, geo-location, and threat intelligence context. The platform detects advanced threats, insider threats, and fraud by applying sophisticated machine learning algorithms and threat chain modeling to event data in real-time; and responds using comprehensive incident management and workflow capabilities, and an automated incident response framework that can automate remediation actions on select threats.

For more information about Securonix Security Analytics Platform visit [www.securonix.com/security-analytics-platform/](http://www.securonix.com/security-analytics-platform/)

#### Securonix UEBA

Leverages sophisticated machine learning and behavior analytics to analyze and correlate interactions between users, systems, applications, IP addresses, and data. Light, nimble, and quick to deploy, Securonix UEBA detects advanced insider threats, cyber threats, fraud, cloud data compromise, and non-compliance. Built-in automated response playbooks and customizable case management work flows allow your security team to respond to threats quickly, accurately, and efficiently.

#### Securonix Cloud Platform

## Visibility Across Your Cloud Infrastructure

## Product Features

### Rapid Deployment and Fast ROI

Securonix Cloud comes with packaged applications specifically designed for insider threat, cyber threat, fraud, and cloud security analytics use cases. Applications include customizable threat models, dashboards, and reports that let you deploy common use cases rapidly and shortens your time to value. Securonix Cloud is also built to quickly and easily scale on-demand in order to meet your requirements.

### Benefit from Cloud-To-Cloud Integrations

Extend seamless security monitoring across your cloud environment without needing to transfer security data in and out of the cloud. Securonix Cloud has built-in APIs for all major cloud infrastructure and application technologies. This allows you to analyze user entitlements and events to look for malicious activity. If you choose to collect on-premises data as well as cloud data, you can correlate between them to analyze end-to-end activities and detect actionable threat patterns.

### Reduce Your Overhead with a Fully Managed Platform

Let Securonix manage your security so you can manage your business. With Securonix Cloud you don't need to worry about the burden of managing your security infrastructure. Securonix professionals will manage your platform operations including, but not limited to, regular system backups, monitoring integration points and feeds, system health and performance monitoring, troubleshooting platform issues, and incident management. Securonix will also manage platform updates, upgrades, and maintenance. Enjoy 24 x 7 operations support and 99.5% uptime, along with continuous upgrades and enhancements without needing to be a product expert.

Avoid hiring expensive security professionals to run your Securonix Cloud deployment. With Securonix Threat Monitoring Services, Securonix will also fully manage your threat monitoring for you.

### Handle Costs Efficiently, Not Exponentially

Securonix Cloud delivers incredible cost efficiency even while allowing for unlimited ingestion and storage. Unlike legacy data collection and log management tools, which typically charge by events per second (EPS) or gigabyte, Securonix Cloud charges by identity, which means that costs are predictable. Considering there is no need to purchase hardware up front, Securonix Cloud has a lower cost of ownership than on-premises solutions.

### Built-In Security

Securonix Cloud SOC 2 Type 2 certified. The certification is awarded after a rigorous assessment of Securonix's security, availability, integrity, and confidentiality processes with regards to cloud-based services. Ingestion nodes, either cloud or on-premises, collect all required data feeds while individual Tenant IDs and dedicated tenants are

used to maintain complete data segregation. Each customer has a customer-specific console that they can use for threat detection, investigation, and reporting. Your security data is kept encrypted while it is in transit, and data at rest can be encrypted if you choose to. With granular, role-based access control, access and entitlements to data can be limited by business needs. Detailed logging capabilities are available to ensure a full audit trail of all activities within the solution.
