PROGRAM OVERVIEW

The Ultimate Free SIEM Upgrade

Transition to Securonix for Advanced and Scalable TDIR and Unmatched Innovation—With Limited-Time Free SIEM Upgrade Offer

Don't Let Your Legacy SIEM Hold You Back

Securonix is offering a free SIEM Upgrade Program that empowers cybersecurity teams to seamlessly upgrade from QRadar, ArcSight, LogRhythm, and Exabeam to the Securonix Unified Defense SIEM, an award-winning platform specifically designed to meet the cybersecurity challenges of today and tomorrow. The Upgrade Program allows organizations to leverage Securonix's SaaS model, its vast experience with SIEM migrations, and extensive out-of-the-box content to quickly and effortlessly move to the company's AI-Reinforced SIEM and its advanced analytics, freeing them from the limitations of legacy SIEM products. Securonix's rapid innovation, powered by its cloud-native EON platform, enables organizations to scale their security operations seamlessly, staying ahead of evolving AI-powered threats while delivering a frictionless CyberOps experience.

The Ultimate FREE SIEM Upgrade Offer

For a limited time, Securonix is offering the following incentives to help you migrate faster and at a lower cost, subject to a minimum subscription:

- ◆ **Free Implementation Services:**

Securonix will provide free implementation services tailored to your organization's data ingestion needs, ensuring a smooth and efficient migration process.

- ◆ **Free Months of SIEM:** Depending on the length of your subscription term, you can receive up to 9 months of free SIEM service over the course of the subscription term.

Why Securonix?

Securonix is at the forefront of advanced Threat Detection, Investigation, and Response (TDIR), offering a platform specifically designed to meet the challenges of both today and tomorrow:

- ◆ **Scalability:** Easily manage growing data volumes with a platform that scales effortlessly.
- ◆ **AI-Reinforced Platform:** Leverage cutting-edge AI and machine learning for more accurate and efficient threat detection.
- ◆ **Innovative Roadmap:** Stay ahead with continuous updates and a forward-thinking approach to cybersecurity.

Effortless Migration Experience

Migrating to Securonix from your existing SIEM solution is easier than you think. With extensive experience in seamless transitions, our team ensures minimal disruption to your operations. By leveraging our SaaS model, advanced analytics, and extensive out-of-the-box content, your organization can quickly experience the full benefits of Securonix's AI-Reinforced SIEM.

Implementation Services Tailored to Your Needs

Securonix offers implementation services tailored to meet varying organizational needs.

Our services include:

- ◆ **Log Sources & Analytics:** Implementation of out-of-the-box log sources and analytics.
- ◆ **Enablement Sessions:** Sessions on Securonix SIEM best practices and enablement.
- ◆ **Use Case Tuning:** Tuning sessions for out-of-the-box use cases.
- ◆ **Value Acceleration:** Quick Wins, MITRE ATT&CK and Insider Threat specific assessments

Making the Switch

Securonix Unified Defense SIEM experts have developed a migration method that simplifies the process of transitioning away from legacy SIEMs. This includes:

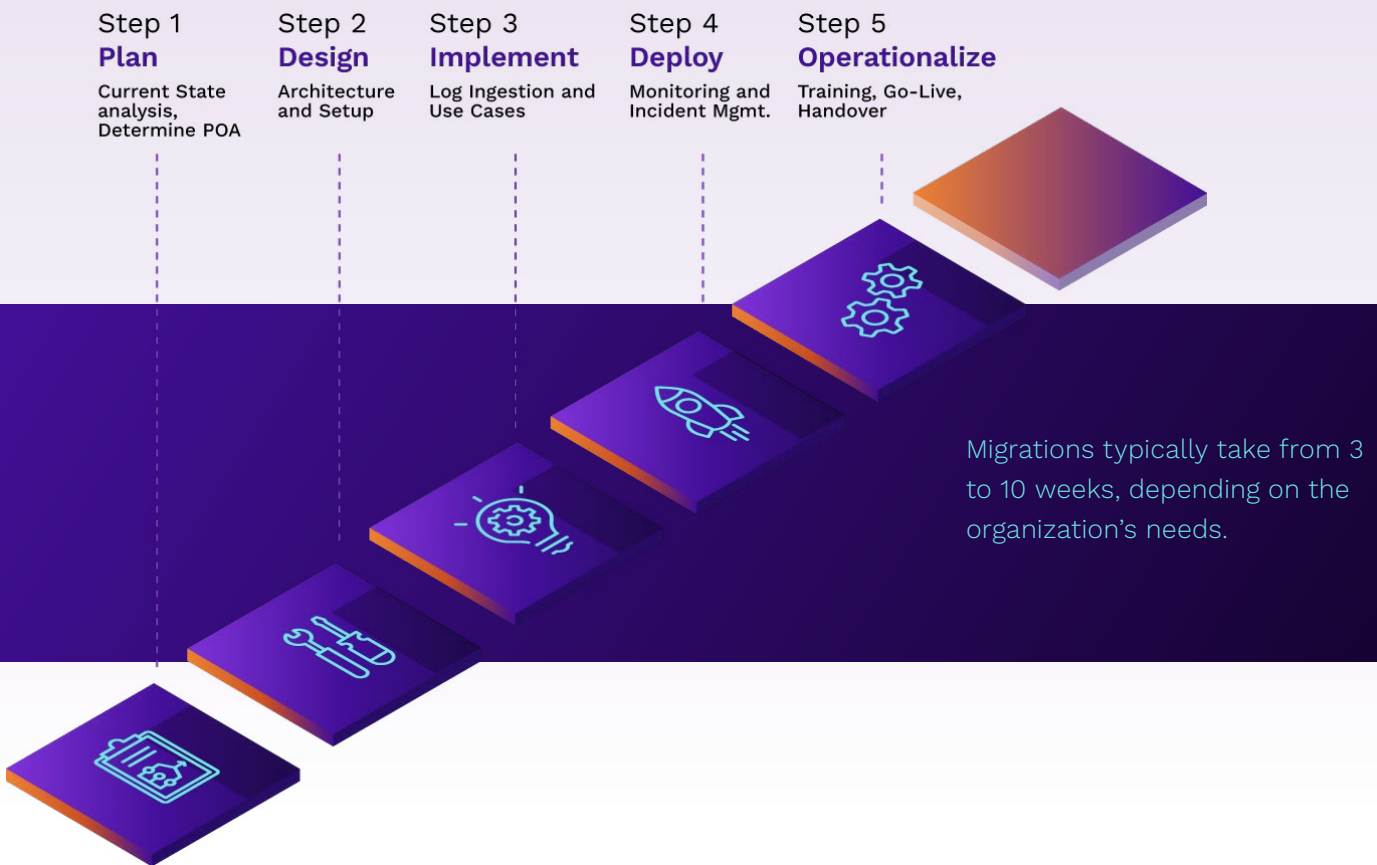

Discovery: A team of Securonix experts analyzes and reviews an organization’s architecture, identifies use cases and data sources to address detection gaps in its existing MITRE ATT&CK coverage, and develops an adoption roadmap, including a project plan and gap analysis report.

Design: Securonix works with the organization to create an implementation plan that integrates each of its chosen data sources. Using in-house migration tools, the Securonix team prioritizes and maps existing use cases, workflows, reports, and dashboards, then provides detailed documentation around use case mapping.

Implement: Securonix experts deploy Securonix Hub and configure out-of-the-box connectors to ensure all data sources and contextual feeds are integrated, and use cases and dashboards are migrated to the platform. This enables organizations to access real-time context and analytics to meet business objectives.

Validate: Securonix optimizes and validates use cases, threat models and conducts kill chain analysis while also testing organizational MITRE ATT&CK coverage to give a holistic understanding of any gaps.

Operationalize: The final phase consists of workshops to refine organizational incident management processes, including the creation and deployment of playbooks and improving workflow automation rules. This allows cybersecurity teams to build tailored content and support rapid adoption.

Don't Wait Until It's Too Late

Ensure your organization's future by upgrading your SIEM today. Take advantage of our limited-time offer and secure a future-proof SIEM solution that provides the advanced capabilities necessary to stay ahead of modern threats.
